SUMMARY

I'm a 3DCV researcher and algorithm engineer, mainly focusing on world models and foundation models in autonomous driving scenarios.

Before that, I got my M.S. degree in Zhejiang University, advised by [Prof. Guofeng Zhang](#), studying on SLAM, visual localization and neural reconstruction.

I am interested in 3D computer vision and generative models, as well as world action models and applications in autonomous driving and embodied AI.

EDUCATION

2022 - 2025	M.S. in Software Engineering at Zhejiang University	(GPA: Top 5%)
2018 - 2022	B.S. in Digital Media at Zhejiang University	(GPA: Top 5%)

SELECTIVE AWARDS AND HONOR

Outstanding Graduates at ZJU, 2022 & 2025

Tianzhou Chen Scholarship of ZJU, 2023

Yongping Scholarship of ZJU, 2020

INTERNSHIP & WORK EXPERIENCE

Senior AI Algorithm Engineer, NIO Inc. Jan 2026 - Now

- Research on foundation model. My main research direction is multi-modal generation and WAM.
- Research on visual-native 4D world model, mainly focus on geometric representation autoencoder (G-RAE) for high-dimensional representation and generation.
- Research on multi-modal world action model.
- Work on end-to-end planner pretraining, mainly focus on auxiliary loss design and joint-prediction MoT architecture design.

Algorithm Engineer, Cainiao Inc., Alibaba Group Mar 2025 - Jan 2026

- Work on world model and diffusion model. Currently, we've investigated in many directions, including DiT-based multi-view AD video generation, SVD-based synthetic video harmonization and more.
- Work on Gaussian Splatting-based sensor simulation system. I mainly focused on street scene reconstruction, editing (insertion and inpainting) and scene expansion with diffusion guidance.
- Research on multi-modal learning, mainly on text-image-3DGS feature alignment.
- Research on 3D reconstruction, mainly on visual reconstruction and depth estimation.

Research Intern, Cainiao Inc., Alibaba Group Mar 2024 - Mar 2025

- Work on SLAM & point cloud registration.
- Research on Gaussian Splatting and scene inpainting.

Research Intern, SenseTime Group Mar 2023 - May 2024

- Create a large-scale indoor localization benchmark, along with an open-source dataset.
- Research on mesh-based landmark localization.
- Maintainer of [XRLocalization](#), an open-source visual re-localization framework.

PROJECTS

N-MMFM: Multi-Modal Foundation Model

Work done in NIO

I am the core contributor of NIO's Multi-Modal Foundation Model (WAM). My work focus on joint visual-action prediction, the design of Mixture-of-Transformer (MoT) structure and the integration to end-to-end planner.

N-WFM: Vision-Native 4D World Foundation Model

Work done in NIO

I am the core contributor of NIO's World Foundation Model. My work focus on 4D generation based on geometry-grounded latent space.

Physical Time Understanding in Video Generation

Work done in NIO

I guided interns to carry out work on physical time understanding and control in video diffusion model. 2 Papers under review [\[1, 2\]](#)

Multi-modal Joint Diffusion for Reconstruction and Detection

Work done in NIO

I guided interns to carry out work on multimodal joint representation and diffusion, using a unified representation space and a generative framework to simultaneously perform high-quality dynamic scene reconstruction and 3D detection. 1 Paper under review [\[3\]](#)

Video Generation with Memory Preserve

Work done in NIO

I participated in guiding interns to conduct research on memory issues in video generation, designing implicit geometric memory and Manifold Cross-Attention to guide the diffusion process. 1 Paper under review [\[4\]](#)

GS-based Sensor Simulation System

Work done in Cainiao

We build an industrial-grade multi-sensor simulation system for unmanned vehicle, which provides more than 210k+ frames training data for perception models. I mainly focus on Neural GS framework building, multi-camera optimization, object generation, scene editing, and harmonization. 5 Papers have been accepted [\[5, 6, 7, 8\]](#).

3DGS Database & Multi-modal Retrieval

Work done in Cainiao

I built the AIGC 3D assets pipeline for our simulation system, including 200+ objects and 100+ scenes. I also worked on multi-modal alignment for text-image-3D feature alignment and retrieval. 1 Paper has been accepted [\[9\]](#).

Visual-based 3D Reconstruction & MVS

Work done in Cainiao

I joined the visual reconstruction team for 2 months and worked in spital-temporal consistency MVS pipeline for better depth estimation. I also built the depth GT refinement pipeline for data curation. 1 Paper has been accepted [\[10\]](#).

Visual Localization for AR Application

Work done in SenseTime

I worked on mesh-based visual localization for outdoor landmark AR in anywhere. I also built a large-scale indoor localization benchmark. 1 Paper has been accepted [\[11\]](#).
